When estimating genetic and phenotypic parameters in the form of variance and covariance components we maximize a log-likelihood function:

$$
\begin{equation*}
\mathrm{I}(\Theta \mid \mathrm{y})=\mathrm{c}-\frac{1}{2}\left[\ln |\mathrm{~V}|+\ln |\mathrm{C}|+\mathrm{y}^{\prime} \mathrm{Py}\right] \tag{1}
\end{equation*}
$$

The general log-likelihood function is based on the multivariate normal density and can be rewritten as:

$$
\begin{equation*}
1(\Theta \mid y) \propto-\frac{1}{2}\left[\ln |R|+\ln |G|+\ln |C|+y^{\prime} P y\right] \tag{2}
\end{equation*}
$$

The form in [2] is much easier to compute than [1].

In order to obtain the variance of the parameter $\operatorname{vector}(\operatorname{Var}(\Theta))$ we must find:
$I_{0}(\Theta)=-\frac{\partial^{2} 1(\Theta \mid y)}{\partial \Theta \partial \Theta^{\prime}}$
Expression [3] is the observed information matrix.
DMUAI is based on a combination of Newton-Raphson and Fisher Scoring (it is based on average of observed and expected information). So in DMUAI the observed information matrix is approximated by the average of observed and expected information matrices.

Asymptotic variance of $\Theta$ is:

$$
\begin{equation*}
\operatorname{Var}(\Theta)=I_{o}^{-1}(\Theta) \tag{4}
\end{equation*}
$$

Square roots of the diagonal elements of $\operatorname{Var}(\Theta)$ will provide standard errors of elements of $\Theta$.

Genetic parameters are, however, often standardized into, say, heritabilities, genetic correlations, and so on. These are generally nonlinear functions of elements in $\Theta$.

To compute the variance of such non-linear functions of random variables in $\Theta$ we use Taylor series expansions.

Let $\mathrm{g}=\mathrm{f}\left(\Theta_{1}, \Theta_{2}, \ldots, \Theta_{\mathrm{t}}\right)$ where $\Theta_{1}, \Theta_{2}, \ldots, \Theta_{\mathrm{t}}$ is a subset of the elements in the $\Theta$-vectors.

If we assume $f($.$) to be continuous around \hat{\Theta}$ and that all derivatives exist and are continuous we can expand $f($.$) around \hat{\Theta}$, where the ${ }^{\wedge}$ indicates the maximizer of [1].

Taking expectations on both sides we obtain:

$$
\begin{equation*}
E\left[f\left(\Theta_{1}, \Theta_{2}, \ldots, \Theta_{t}\right)\right]=f\left(\hat{\Theta}_{1}, \hat{\Theta}_{2}, \ldots, \hat{\Theta}_{t}\right) \tag{6}
\end{equation*}
$$

By subtracting [6] from [5] we get:

$$
\mathrm{f}\left(\Theta_{1}, \Theta_{2}, \ldots, \Theta_{1}\right)-\mathrm{E}\left[\mathrm{f}\left(\Theta_{1}, \Theta_{2}, \ldots, \Theta_{1}\right)\right]=\left[\left.\frac{\partial \mathrm{f}}{\partial \Theta_{1}}\right|_{\Theta_{i}=\hat{\theta}_{i}} \sigma_{\theta_{i}}^{2}\right\rfloor+\ldots+\left\lfloor\left.\frac{\partial \mathrm{f}}{\partial \Theta_{t}}\right|_{\theta_{i}=\hat{\theta}_{i}}\left(\Theta_{\mathrm{i}}-\hat{\Theta}_{t}\right)\right][7]
$$

Squaring both sides and take expectations

$$
\begin{aligned}
& \left.\left[\operatorname{E[f}\left(\Theta_{1}, \Theta_{2}, \ldots, \Theta_{t}\right)-\operatorname{E[f(}\left(\Theta_{1}, \Theta_{2}, \ldots, \Theta_{t}\right)\right]\right]^{2}= \\
& \left.\left(\frac{\partial \mathrm{f}}{\partial \Theta_{1}}\right)^{2}\right|_{\theta_{1}=\hat{\theta}_{1}} \sigma_{\theta_{1}}^{2}+\ldots+\left.\left(\frac{\partial \mathrm{f}}{\partial \Theta_{t}}\right)^{2}\right|_{\theta_{1}=\hat{\theta}_{1}} \sigma_{\theta_{1}}^{2}+ \\
& 2 \sum_{\mathrm{i}=1}^{1} \sum_{\mathrm{j}=\mathrm{i}+1}^{\mathrm{L}}\left[\left.\left(\frac{\partial \mathrm{f}}{\partial \Theta_{\mathrm{i}}} \frac{\partial \mathrm{f}}{\partial \Theta_{\mathrm{j}}}\right)\right|_{\theta_{\mathrm{i}}=\hat{\theta}_{\mathrm{i}}} \sigma_{\theta_{i} \theta_{j}}\right]
\end{aligned}
$$

In [8] the parameters $\sigma_{\theta_{i}}^{2} \sigma_{\theta_{i, \theta},}$ can be obtained from [4]. The left hand side of [8] is the definition of a variance.

Defining $v$ as a vector of first derivatives of $\mathbf{f}$ with respect to each of the $t$ parameters in $\Theta$, then [8] can be written in matrix notation as:

$$
\mathrm{E}\left[\mathrm{f}\left(\Theta_{1}, \Theta_{2}, \ldots, \Theta_{t}\right)-\mathrm{E}\left[\mathrm{f}\left(\Theta_{1}, \Theta_{2}, \ldots, \Theta_{t}\right)\right]\right]^{2}=v^{\prime} \operatorname{Var}(\Theta) v=v^{\prime} \mathrm{I}_{0}^{-1}(\Theta) v
$$

## Example:

The following bivariate model were analyzed:
$y_{1 i j k}=F_{1 i}+b_{1 j}+a_{i k}+e_{1 i j k}$
$y_{2 i \mathrm{ijk}}=\mathrm{F}_{2 \mathrm{i}}+\mathrm{b}_{2 \mathrm{j}}+\mathrm{a}_{2 \mathrm{k}}+\mathrm{e}_{2 \mathrm{ijk}}$
where $y_{1 i j k}$ and $y_{2 \mathrm{ijk}}$ were records on trait 1 and 2 resp., $F_{\text {. }}$ were a set of fixed effects, $b_{j}$ were random environmental effects, $\mathrm{a}_{. \mathrm{k}}$ were additive animal effects and $\mathrm{e}_{. \mathrm{ijk}}$ were random residuals. Trait 1 and trait 2 were measured in disjoint environments and on different, but related animals. Due to that $\mathrm{b}_{1 \mathrm{j}}, \mathrm{b}_{2 \mathrm{j},} \mathrm{e}_{1 \mathrm{ijk}}$ and $\mathrm{e}_{2 \mathrm{ijk}}$ were uncorrelated, and $\mathrm{a}_{1 \mathrm{k}}$ and $\mathrm{a}_{2 \mathrm{k}}$ were correlated.

All in all the $\theta$-vector therefore contained seven parameters:
$\theta^{\prime}=\left[\sigma_{\mathrm{b}_{1}}^{2}, \sigma_{\mathrm{b}_{2}}^{2}, \sigma_{\mathrm{a}_{1}}^{2}, \sigma_{\mathrm{a}_{1} \mathrm{a}_{2}}, \sigma_{\mathrm{a}_{2}}^{2}, \sigma_{\mathrm{c}_{1}}^{2}, \sigma_{\mathrm{c}_{2}}^{2}\right]$
The $\theta$-vector, than maximized the likelihood function were:

Table 1. Asymptotic (co)variance matrix(*1000) for the $\theta$-vector in the example.

|  | $\sigma_{\mathrm{b}_{1}}^{2}$ | $\sigma_{\mathrm{b}_{2}}^{2}$ | $\sigma_{\mathrm{a}_{1}}^{2}$ | $\sigma_{\mathrm{a}_{1} \mathrm{a}_{2}}$ | $\sigma_{\mathrm{a}_{2}}^{2}$ | $\sigma_{\mathrm{c}_{1}}^{2}$ | $\sigma_{\mathrm{c}_{2}}^{2}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\sigma_{\mathrm{b}_{1}}^{2}$ | .5113 |  |  |  |  |  |  |
| $\sigma_{\mathrm{b}_{2}}^{2}$ | .0093 | .3732 |  |  |  |  |  |
| $\sigma_{\mathrm{a}_{1}}^{2}$ | .1155 | .0203 | 6.8796 |  |  |  |  |

Table 2. Asymptotic correlation matrix (SE on diagonal) for the $\theta$-vector in the example.

|  | $\sigma_{b_{1}}^{2}$ | $\sigma_{b_{2}}^{2}$ | $\sigma_{a_{1}}^{2}$ | $\sigma_{\mathrm{a}_{1 \mathrm{a}_{2}}}$ | $\sigma_{\mathrm{a}_{2}}^{2}$ | $\sigma_{\mathrm{c}_{1}}^{2}$ | $\sigma_{\mathrm{c}_{2}}^{2}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\sigma_{\mathrm{b}_{1}}^{2}$ | .023 |  |  |  |  |  |  |
| $\sigma_{\mathrm{b}_{2}}^{2}$ | .021 | .019 |  |  |  |  |  |
| $\sigma_{\mathrm{a}_{1}}^{2}$ | .062 | .013 | .083 |  |  |  |  |
| $\sigma_{\mathrm{a}_{1} \mathrm{a}_{2}}$ | -.111 | -.154 | .016 | .043 |  |  |  |
| $\sigma_{\mathrm{a}_{2}}^{2}$ | -.018 | -.196 | -.014 | .228 | .029 |  |  |
| $\sigma_{\mathrm{c}_{1}}^{2}$ | -.116 | -.016 | -.946 | .010 | .017 | .055 |  |
| $\sigma_{\mathrm{c}_{2}}^{2}$ | .009 | .059 | .009 | -.127 | -.801 | -.011 | .029 |

The following standardized population parameters could be computed:

$$
\begin{aligned}
& \mathrm{h}_{1}^{2}=\frac{\sigma_{\mathrm{a}_{1}}^{2}}{\sigma_{\mathrm{b}_{1}}^{2}+\sigma_{\mathrm{a}_{1}}^{2}+\sigma_{\mathrm{c}_{1}}^{2}} \\
& \mathrm{~h}_{1 \mid \mathrm{b}}^{2}=\frac{\sigma_{\mathrm{a}_{1}}^{2}}{\sigma_{\mathrm{a}_{1}}^{2}+\sigma_{\mathrm{c}_{1}}^{2}} \\
& \mathrm{r}_{\mathrm{a}_{1,2} 2}=\frac{\sigma_{\mathrm{a}_{1} \mathrm{a}_{2}}}{\sqrt{\sigma_{\mathrm{a}_{1}}+\sigma_{\mathrm{a}_{2}}^{2}}}
\end{aligned}
$$

Several other population parameters could be computed, but we only use the three defined above for illustration.

For the heritability corrected for the random environmental factor ( $h_{| | b}^{2}$ ) we get is:

$$
\begin{aligned}
& \mathrm{h}_{1 \mid \mathrm{b}}^{2}=\frac{\sigma_{\mathrm{a}_{1}}^{2}}{\sigma_{\mathrm{a}_{1}}^{2}+\sigma_{\mathrm{e}_{1}}^{2}}=\frac{201997}{.201997+.061806}=.7657 \\
& \frac{\partial_{\mathrm{h}_{1 \mid \mathrm{b}}^{2}}^{\partial}}{\partial \sigma_{\mathrm{a}_{1}}^{2}}=\frac{\sigma_{\mathrm{e}_{1}}^{2}}{\left(\sigma_{\mathrm{a}_{1}}^{2}+\sigma_{\mathrm{e}_{1}}^{2}\right)^{2}}=\cdot \frac{061806}{(.201997+.061806)^{2}}=.8881 \\
& \frac{\partial \mathrm{~h}_{1 \mid b}^{2}}{\partial \sigma_{\mathrm{e}_{1}}^{2}}=\frac{-\sigma_{\mathrm{a}_{1}}^{2}}{\left(\sigma_{\mathrm{a}_{1}}^{2}+\sigma_{\mathrm{e}_{1}}^{2}\right)^{2}}=\frac{-.201997}{(.201997+.061806)^{2}}=-2.9026
\end{aligned}
$$

$$
\begin{aligned}
\operatorname{Var}\left(\mathrm{h}_{1 \mid \mathrm{b}}^{2}\right) & =\left(\frac{\partial \mathrm{h}_{1 \mid \mathrm{b}}^{2}}{\partial \sigma_{\mathrm{a}_{1}}^{2}}\right)^{2} \sigma_{\sigma_{\mathrm{a}_{1}}^{2}}^{2}+\left(\frac{\partial \mathrm{h}_{1 \mid \mathrm{b}}^{2}}{\partial \sigma_{\mathrm{e}_{1}}^{2}}\right)^{2} \sigma_{\sigma_{\mathrm{e}_{1}}^{2}}^{2}+2\left(\frac{\partial \mathrm{~h}_{1 \mid \mathrm{b}}^{2}}{\partial \sigma_{\mathrm{a}_{1}}^{2}}\right)\left(\frac{\partial \mathrm{h}_{1 \mid \mathrm{b}}^{2}}{\partial \sigma_{\mathrm{e}_{1}}^{2}}\right) \sigma_{\sigma_{\mathrm{a}_{1+1}}}^{2} \\
& =(.8881)^{2}(.0068796)+(-2.9026 \quad)^{2}(.0030193)+2(.8881)(-\quad 2.9026)(-. \quad 004310) \\
& =.04197
\end{aligned}
$$

$$
\mathrm{SE}\left(\mathrm{~h}_{1 \mid \mathrm{b}}^{2}\right)=\sqrt{.04197}=.02048
$$

## For the genetic correlation we get:

$$
\begin{aligned}
& r_{\mathrm{a}_{1} \mathrm{a}_{2}}=\frac{\sigma_{\mathrm{a}_{1} \mathrm{a}_{2}}}{\sqrt{\sigma_{\mathrm{a}_{1}}^{2} \sigma_{\mathrm{a}_{2}}^{2}}}=\frac{.01541}{.201997+.007655}=.39198 \\
& \frac{\partial \mathrm{r}_{\mathrm{a}_{1} \mathrm{a}_{2}}}{\partial \sigma_{\mathrm{a}_{1} \mathrm{a}_{2}}}=\frac{1}{\sqrt{\left(\sigma_{\mathrm{a}_{1}}^{2} \sigma_{\mathrm{a}_{2}}^{2}\right.}}=\frac{1}{\sqrt{(.201997)(.00765)}}=25.43002 \\
& \frac{\partial \mathrm{r}_{\mathrm{a}_{1} \mathrm{a}_{2}}}{\partial \sigma_{\mathrm{a}_{1}}^{2}}=-\frac{\sigma_{\mathrm{a}_{1} \mathrm{a}_{2}}}{2 \sqrt{\sigma_{\mathrm{a}_{2}}^{2}}\left(\sigma_{\mathrm{a}_{1}}^{2}\right)^{\frac{3}{2}}}=-\frac{.015414}{2 \sqrt{(.007655)}(.201997)^{\frac{3}{2}}}=-.970259 \\
& \frac{\partial \mathrm{r}_{\mathrm{a}_{1} \mathrm{a}_{2}}}{\partial \sigma_{\mathrm{a}_{2}}^{2}}=-\frac{\sigma_{\mathrm{a}_{1} \mathrm{a}_{2}}}{2 \sqrt{\sigma_{\mathrm{a}_{1}}^{2}}\left(\sigma_{\mathrm{a}_{2}}^{2}\right)^{\frac{3}{2}}}=-\frac{.015414}{2 \sqrt{(.201997)}(.007655)^{\frac{3}{2}}}=-25.601758 \\
& \operatorname{Var}\left(\mathrm{r}_{\mathrm{a}_{1} \mathrm{a}_{2}}\right)=\left(\frac{\partial \mathrm{r}_{\mathrm{a}_{1} \mathrm{a}_{2}}}{\partial \sigma_{\mathrm{a}_{1} \mathrm{a}_{2}}}\right)^{2} \sigma_{\sigma_{\mathrm{a}_{1} \mathrm{a}_{2}}^{2}}^{2}+\left(\frac{\partial \mathrm{r}_{\mathrm{a}_{1} \mathrm{a}_{2}}}{\partial \sigma_{\mathrm{a}_{1}}^{2}}\right)^{2} \sigma_{\sigma_{\mathrm{a}_{1}}^{2}}^{2}+\left(\frac{\partial \mathrm{r}_{\mathrm{a}_{1} \mathrm{a}_{2}}}{\partial \sigma_{\mathrm{a}_{2}}^{2}}\right)^{2} \sigma_{\sigma_{\mathrm{a}_{2}}}^{2} \\
& +2\left(\frac{\partial r_{a_{1} a_{2}}}{\partial \sigma_{a_{1} a_{2}}}\right)\left(\frac{\partial r_{a_{1} a_{2}}}{\partial \sigma_{a_{1}}^{2}}\right) \sigma_{\sigma_{a_{1} a_{2}}, \sigma_{a 1}^{2}}+2\left(\frac{\partial \mathrm{r}_{\mathrm{a}_{1} \mathrm{a}_{2}}}{\partial \sigma_{\mathrm{a}_{1} \mathrm{a}_{2}}}\right)\left(\frac{\partial \mathrm{r}_{\mathrm{a}_{1} \mathrm{a}_{2}}}{\partial \sigma_{\mathrm{a}_{2}}^{2}}\right) \sigma_{\sigma_{\mathrm{a}_{1} \mathrm{a}_{2}, \sigma_{a_{2}}}}+2\left(\frac{\partial \mathrm{r}_{\mathrm{a}_{1} \mathrm{a}_{2}}}{\partial \sigma_{\mathrm{a}_{1}}^{2}}\right)\left(\frac{\partial \mathrm{r}_{\mathrm{a}_{1} \mathrm{a}_{2}}}{\partial \sigma_{\mathrm{a}_{2}}^{2}}\right) \sigma_{\sigma_{\mathrm{a}_{1}, \sigma_{a_{2}}}^{2}} \\
& =(25.4300)^{2}(.001850)+(-.97026){ }^{2}(.0068796)+(-25.60176)^{2}(.0008204) \\
& +2(25.43001 \quad)(-.97026) \quad(.00005811 \quad)+2(25.43001 \quad)(-25.6017 \quad 6)(.00028) \\
& +2(-.97026)(-25.60176)(-.000033) \\
& =1.36972 \\
& \operatorname{SE}\left(\mathrm{r}_{\mathrm{a}_{1} \mathrm{a}_{2}}\right)=\sqrt{1.36972}=1.17035
\end{aligned}
$$

Finally for the heritability ( $\mathrm{h}_{1}^{2}$ ) we get:

$$
\begin{aligned}
& \mathrm{h}_{1}^{2}=\frac{\sigma_{\mathrm{a}_{1}}^{2}}{\sigma_{\mathrm{b}_{1}}^{2}+\sigma_{\mathrm{a}_{1}}^{2}+\sigma_{\mathrm{e}_{1}}^{2}}=\frac{201997}{.054212+.201997+.061806}=.6352 \\
& \frac{\partial \mathrm{~h}_{1}^{2}}{\partial \sigma_{\mathrm{a}_{1}}^{2}}=\frac{\sigma_{\mathrm{b}_{1}}^{2}+\sigma_{\mathrm{e}_{1}}^{2}}{\left(\sigma_{\mathrm{b}_{1}}^{2}+\sigma_{\mathrm{a}_{1}}^{2}+\sigma_{\mathrm{e}_{1}}^{2}\right)^{2}}=\frac{.054212+.061806}{(.054212+.201997+.061806)^{2}}=1.147177 \\
& \frac{\partial \mathrm{~h}_{1}^{2}}{\partial \sigma_{\mathrm{b}_{1}}^{2}}=\frac{-\sigma_{\mathrm{a}_{1}}^{2}}{\left(\sigma_{\mathrm{b}_{1}}^{2}+\sigma_{\mathrm{a}_{1}}^{2}+\sigma_{\mathrm{e}_{1}}^{2}\right)^{2}}=\frac{-.201997}{(.054212+.201997+.061806)^{2}}=-1.99733 \\
& \frac{\partial \mathrm{~h}_{1}^{2}}{\partial \sigma_{\mathrm{e}_{1}}^{2}}=\frac{-\sigma_{\mathrm{a}_{1}}^{2}}{\left(\sigma_{\mathrm{b}_{1}}^{2}+\sigma_{\mathrm{a}_{1}}^{2}+\sigma_{\mathrm{e}_{1}}^{2}\right)^{2}}=\frac{-.201997}{(.054212+.201997+.061806)^{2}}=-1.99733 \\
& \operatorname{Var}\left(\mathrm{~h}_{1}^{2}\right)=\left(\frac{\partial \mathrm{h}_{1}^{2}}{\partial \sigma_{\mathrm{a}_{1}}^{2}}\right)^{2} \sigma_{\sigma_{\mathrm{a}_{1}}^{2}}^{2}+\left(\frac{\partial \mathrm{h}_{1}^{2}}{\partial \sigma_{\mathrm{b}_{1}}^{2}}\right)^{2} \sigma_{\sigma_{\mathrm{b}_{1}}^{2}}^{2}+\left(\frac{\partial \mathrm{h}_{1}^{2}}{\partial \sigma_{\mathrm{e}_{1}}^{2}}\right)^{2} \sigma_{\sigma_{\mathrm{e}_{1}}^{2}}^{2} \\
& +2\left(\frac{\partial \mathrm{~h}_{1}^{2}}{\partial \sigma_{\mathrm{a}_{1}}^{2}}\right)\left(\frac{\partial \mathrm{h}_{1}^{2}}{\partial \sigma_{\mathrm{b}_{1}}^{2}}\right) \sigma_{\sigma_{\mathrm{a}_{1} \mathrm{~b}_{1}}^{2}}^{2}+2\left(\frac{\partial \mathrm{~h}_{1}^{2}}{\partial \sigma_{\mathrm{a}_{1}}^{2}}\right)\left(\frac{\partial \mathrm{h}_{1}^{2}}{\partial \sigma_{\mathrm{e}_{1}}^{2}}\right) \sigma_{\sigma_{\mathrm{a}_{1} \mathrm{e}_{1}}^{2}}^{2}+2\left(\frac{\partial \mathrm{~h}_{1}^{2}}{\partial \sigma_{\mathrm{b}_{1}}^{2}}\right)\left(\frac{\partial \mathrm{h}_{1}^{2}}{\partial \sigma_{\mathrm{e}_{1}}^{2}}\right) \sigma_{\sigma_{\mathrm{b}_{1} \mathrm{e}}}^{2} \\
& =(1.147177 \quad)^{2}(.0068796)+(-1.99733 \quad)^{2}(.005113)+(-1.99733 \quad)^{2}(.003019) \\
& +2(1.147177)(-1.99733)(.000116)+2(1.147177)(-1.99733)(-.004310) \\
& +2(-1.99733)(-1.99733)(-.001436 \quad) \\
& =.03901
\end{aligned}
$$

$\operatorname{SE}\left(\mathrm{h}_{1}^{2}\right)=\sqrt{.03901}=.19751$
